

Iskraemeco concludes a landmark smart metering contract worth up to 160 million €

29th, July 2015

Iskraemeco, one of the leading smart metering providers based in Slovenia, entered into contractual agreement with four Dutch utilities for delivering 1, 6 million smart electricity meters until 2020. Potential extension of smart meter quantities is expected during the course of the project.

Alliander, Stedin, D.N.B.W. and Westland Infra manage a network consisting of more than 5 million electricity metering points and 4, 8 million gas connections. First smart meter deliveries are expected to start in March 2016.

Iskraemeco secured a partnership with Flonidan A/S, one of the leading smart gas meter manufacturers from Denmark, to deliver the desired dual-fuel solution. Within the projects` scope, Flonidan A/S will install 1, 35 million smart gas meters until 2020.

The signing of the contract clearly shows a future oriented stance of the four utilities that agreed to follow these common objectives:

1. Provide at least 80% of all small-scale households with a Smart meter by 2021;
2. Maximise consumer satisfaction;
3. Minimise the total cost of ownership in the entire Smart Meter Supply Chain and Smart metering process;
4. Implement measures according to the Fair Meter principles.

ISKRAEMECO

Iskraemeco`s new smart meter, AM550, based on a modular platform was designed in line with rigorous tender requirements in order to minimize the utilities total cost of ownership and deliver the required 20 years life-time guarantee.

Dieter Brunner, CEO of Iskraemeco, said: "Our partnership with Liander, Stedin, D.N.B.W. and Westland represents a major step for Iskraemeco. This truly is a Lighthouse project and once it is finished it will be a landmark achievement for the country. We are honoured to be part of this one of a kind project. Most of all we are extremely proud that the four partnering utilities have placed their trust in our people, our capabilities and our product."
